

## **Region 3 GPRA Baseline RCRA Corrective Action Facility**

# **Concast Metals Products Co.**

**Mars Myoma Road  
Mars, PA 16046  
Congressional District 4  
EPA ID #: PAD000765651  
Last Updated: 1/01/2004**

## **Current Progress at the Site**

---

In August of 1999, the U.S. Environmental Protection Agency (EPA), the U.S. Army Corps of Engineers, and the Pennsylvania Department of Environmental Protection (PADEP) conducted a site visit. The visit consisted of a facility tour, and information gathering to assess the current status of the facility. After additional ground water and surface water samples were collected, EPA determined that both Environmental Indicators for human exposures and groundwater migration are under control. The facility will continue to sample surface water along Breakneck Creek and onsite groundwater wells for boron to ensure that human exposures will continue to be under control.

## **Site Description**

---

Presently, the facility castes semi-finished copper alloys in the form of bars, tubes and other shapes by remelting scrap metals. The manufacturing process involves the use of continuous casting furnaces. The furnaces are hooded to collect fumes and dust, which are vented to a baghouse along the west wall of the main building. The dust contains approximately four percent zinc. From the baghouse the dust is collected in reinforced plastic bags. Once the bags are full, they are stored at a less than 90-day storage area before they are shipped off-site for metal reclamation. Generated waste water is treated at the on-site water treatment plant and discharges to Breakneck Creek in accordance with the National Pollution Discharge Elimination System (NPDES).
